

Drilling rigs contain a staggering amount of complex equipment working in unison to keep your rig active and efficient. With so many tools and technologies working together, sometimes one equipment failure can bring a rig to a halt. How does Pason make sure it doesn't happen again?

Pason uses Splunk, a data analysis platform, to monitor, record, and report metrics related to your rig's activity and performance. Learn more about some of the metrics we monitor below.

How does Pason monitor your rig?

How often does Pason monitor your rig?
